

Protease-Plus

90 capsules, Enzyme supplement, Stock No. 1841-7

Doctors agree that as we grow older, our bodies become less able to produce enzymes. Enzymes that break down proteins are especially critical to good health because undigested proteins have been linked to a variety of unsavory health concerns.

Protease-Plus provides proteases, digestive enzymes that break down proteins into amino acids for maximum digestive and intestinal support.

Did you know?

Protease enzymes are found in the stomach and in the pancreatic and intestinal juices. They are especially important because they break down proteins into amino acids. Any time a deficiency of protease exists, proteins can go through the intestinal tract and remain undigested. At the same time, malabsorption of nutrients and chronic health conditions increase. Taking supplemental enzymes can help to ensure that the body receives full nutritional value from food intake.

NSP Advantage

90 capsules. Enzyme Supplement.

NSP Protease-Plus combines protease enzyme with plant-sourced trace mineral concentrate for maximum intestinal support. Minerals help activate enzymes for optimal effect.

Ingredients: Each capsule contains 60,000 HUT (a measure of enzyme activity) of protease in a base of beet root (*Beta vulgaris*) fibre and full spectrum plant-sourced trace mineral concentrate.

Recommendation: Take 1-3 capsules between meals for best results.

Features & Benefits

- Breaks down protein compounds.
- Provides a full spectrum of plant-derived trace minerals, which help activate enzymes.
- Supports optimal immunity through improved digestion, and by activating macrophages and natural killer cells.
- Improved digestion may help keep intestines protected from parasites and other opportunistic organisms that may weaken the intestinal system.
- May help increase flexibility of red blood cells.
