

Nature's Sweet Life Xylitol Gum

100 pieces, Chewing Gum with Xylitol

Cinnamon flavour, Stock No. 5400-8

Spearmint flavour, Stock No. 5405-0

Most people have a “sweet tooth” – a fondness for things that taste sweet. If your sweet tooth is small, chances are you won't get yourself into a lot of the troubles associated with overconsumption of sweets. But if your sweet tooth is too big, then you soon won't have any teeth at all!

Nature's Sunshine's new Nature's Sweet Life products bring this dental dilemma to an end. All of the Nature's Sweet Life products are sweetened with xylitol. Decades of scientific research and over 1,500 published papers have confirmed that xylitol can improve dental health.

Did you know?

A natural compound, xylitol looks and tastes like sugar. It is found in many common fruits and vegetables, and it is even produced in our bodies during normal metabolism. Xylitol is as sweet as sugar, yet it carries none of the health concerns of artificial sweeteners, making it completely safe for both children and adults.

Unlike most sugar molecules, which are based on a six-carbon structure, xylitol is based on five carbon atoms. Because of its distinctive structure, bacteria cannot utilize xylitol for energy. Its chemical configuration also inhibits the body's ability to fully metabolize it, making it the perfect sweetener for those concerned with blood sugar balance.

NSP Advantage

Chewing Nature's Sweet Life Xylitol Gum may actually help improve the health of your

teeth! First, chewing gum after a meal stimulates the production of saliva, which washes the teeth and neutralizes harmful acid produced by bacteria. Second, xylitol helps inhibit the ability of bacteria to attach to teeth and tissues in the mouth. Third, xylitol cannot be metabolized by bacteria, and so the process that creates harmful, enamel-eating acids is drastically slowed.

Regular use of xylitol has been shown to help reduce dental plaque—the first stage of cavity development, tartar formation and tooth staining—and promote better oral health. New Nature's Sweet Life Xylitol Gum freshens breath, cleans teeth and promotes dental health with all of the flavor and none of the harmful effects of sugar-laden sweets and gum.

Ingredients: Each 1.1 gram piece of gum contains Xylitol, gum base, natural flavour (cinnamon oil or spearmint oil), vegetable glycerin, gum arabic, soy lecithin, and beeswax (natural glazing agent).

Recommendation: Chew after or between meals to freshen breath and promote oral health. Not recommended for pets.

Risk Information: Xylitol may pose a risk to household pets, especially dogs. Pets should not consume xylitol-containing products in any amounts. Dogs ingesting large amounts of products sweetened with xylitol may have a fairly sudden drop in blood sugar, resulting in loss of coordination, depression and seizures.

The toxicity of xylitol in dogs in no way reflects the safety of xylitol in humans. Xylitol has no known toxicity in humans.

Features & Benefits

- Promotes oral health.
- Helps freshen breath.
